43	[recruitment_msg_1] Show the field ONLY if: [recruit_nd(999)] = '0'	About Our Research Program Did you know that an estimated 33 million people are living with diabetes in the United States? Type 2 diabetes accounts for 90-95% of all cases of diabetes, and while it typically develops in adults over the age of 45, there are increasing numbers of children, teenagers, and young adults diagnosed each year. Roughly 38% of the adult population (96 million) in the United States have prediabetes. Having type 2 diabetes places one at risk for serious health issues and due to its overwhelming prevalence, we are all impacted by this disease. Our team, funded by the National Institutes of Health (NIH), is undertaking an innovative and exciting research program on persons with type 2 diabetes. We are developing a thoughtfully designed, ethically collected, and comprehensive dataset for researchers to use with the ultimate goal of identifying the root causes of type 2 diabetes so that treatments and prevention strategies can be successfully developed. Most importantly, we are focused on collecting data from a diverse group of people from three geographic locations in the US - Alabama, California, and Washington. This research program will be inclusive and diverse so that it might lead to important break-throughs in type 2 diabetes that will help everyone. We are also inviting people who do not have type 2 diabetes to participate in the research program.	descriptive

44	[recruitment_msg_2] Show the field ONLY if: [recruit_nd(999)] = '0'	What can you do to help? We have contacted you because we hope that you will help us in our endeavor to better understand type 2 diabetes! To find answers to frequently asked questions on eligibility, what would be expected of you as a participant, compensation, and more, OR if you would a team member to call you to answer any questions you have, please click on "I still have questions" and click the "Next page" button below. If you would like to participate in this important research, select "Yes, I'm interested" and click the "Next page" button below to learn if you are eligible. We hope to hear from you!	descriptive
45	[scrn_intst1] Show the field ONLY if: [recruit_nd(999)] = '0'	Are you interested to learn if you're eligible for our research program?	radio, Required 1 Yes, I'm interested 2 I have questions 0 No I'm not interested at this time Custom alignment: LV

53	[scrn_faq]	Who can participate in AI-READI? We are enrolling persons aged 40 years and over, with and without type 2 diabetes. Although type 2 diabetes can occur at any age, most people are diagnosed after the age of 40. People without diabetes are also eligible to participate in AI-READI. You received a personalized letter because you have been identified as a person who is eligible for participation. How will the AI-READI research program help people? Type 2 diabetes has implications on many aspects of your health - and your life in general. There is no cure for type 2 diabetes and we want to take steps toward finding treatments. The AI-READI research program aims to help people with type 2 diabetes by conducting a large survey and testing a diverse group of people with and without diabetes. The data collected will be analyzed by scientists with the help of machine learning and artificial intelligence to gain a deeper understanding of the physiological complications of the disease. By refining our methods of controlling diabetes, we hope to identify pathways and opportunities for a cure, ultimately improving the quality of life for individuals with type 2 diabetes. The AI-READI research program has the potential to help people with type 2 diabetes return to happier and healthier lives. Where does the research program take place? Research visits take place at three locations, one of which will be convenient for you: We will enroll about 4,000 people in these three states. Researchers from all three universities - UAB, UCSD, and UW - are overseeing this program. What does my participation involve? We are collecting data on many features of health and everyday life that can be impacted by, or contribute to, type 2 diabetes. These include your health history, medications you may be taking, physical activity, lifestyle characteristics, vision, memory and thinking, blood chemistry, and heart health.You will be asked to complete some questionnaires at your convenience prior to visiting us. The questionnaires may be completed on a computer, tablet, or smartphone, but we also have other options if you are unable to complete the questionnaires electronically (contact us using the information above and we will help you!). At your in-person visit with us, the first half may feel like a routine wellness exam. We will take your vital signs, check your heart function by performing a quick electrocardiogram (ECG), test your nerve response to light touch, take a blood sample, and test your vision. We will also take pictures of your eyes. Participation in this research program also involves an at-home component. Before you leave our office, we will give you a "take-home kit" that includes a continuous glucose monitor (aka. CGM),	descriptive

a physical activity monitor (Garmin watch designed for research), and an environmental sensor. The CGM and physical activity monitor will need to be worn for 10 days to collect information about how your glucose levels change during your daily activities, how many steps you take each day, your heart rate, how much time you spend sleeping, and the oxygen level in your blood. These devices do not have cameras or a microphone. They cannot collect any videos, photographs, or sound recordings from your home. After the 10-day monitoring period is complete, we will ask you to return the devices using the box and prepaid shipping label provided to you. Once we receive the devices back from you, your participation is complete.Your participation in this research program is voluntary and will not impact any healthcare you receive. How long will the visit last? For most people, the in-person visit will last between 3 and 4 hours, but the exact timing will vary. If you feel weary during the visit, we can always take a break! We also have snacks if you feel hungry. Your parking will be free of charge in a parking area at or very near our facility. You will wear and use the monitors for 10 days total before sending them back to us. What will you do with the data you obtain from my participation? Data obtained from you in AI-READI will be collected responsibly, fairly, and ethically. You are participating in an anonymous fashion with respect to the information collected in this program. None of your identifying characteristics such as your name, address, phone number, email or any other identifying characteristic will be included in the publicly available dataset that will be used by scientists for analysis. The only identifying information that will be released is the whole genome sequencing (genetic information), this will be released in a limited dataset that will be available by application only. Will I be compensated for participating in AI-READI? As a token of our appreciation, we will provide you with a stipend of $200 after you complete the in-person visit, questionnaires, and have returned the at-home monitoring devices to us. Progress in scientific knowledge cannot happen without volunteers like you! Who will use the information you collect? The AI-READI research program is being specifically designed for researchers who develop technologies that identify patterns, trends, and relationships in data. The goal is to develop a deeper understanding of the risk factors, causes, and consequences of type 2 diabetes. Researchers will be using artificial intelligence approaches to do this, which is why it is so important to make sure that the data they analyze is inclusive and better represents the diversity of people afflicted with the disease. The goal of these analyses is to identify solutions for complex challenges in type 2 diabetes. The data will be made available to researchers

from around the world who are seeking to help resolve the complexities of type 2 diabetes. The researchers will NOT have access to your personally identifying information. Your whole genome sequencing (genetic information) will only be available to researchers who apply and are approved by a review panel.The AI-READI project is one of several projects funded under the NIH's Bridge to Artificial Intelligence (Bridge2AI) initiative. The goal of Bridge2AI is to advance the use of new artificial intelligence technologies in solving real-world problems in medicine, and doing so in a manner that is ethical and inclusive. What is Machine Learning and Artificial Intelligence and what do they have to do with this research program? Machine learning is a type of artificial intelligence that involves training computers to learn from data and make predictions or decisions based on that learning. In the context of health research, machine learning can be used to analyze large amounts of data collected from individuals who have participated in studies. This data may include information about medical history, lifestyle factors, genetic information, and other health-related details. By analyzing this data using machine learning, researchers can identify patterns and relationships that may not be immediately apparent to the human eye. For example, machine learning algorithms may be able to identify risk factors for certain diseases or conditions, or predict the effectiveness of different treatments for specific individuals based on their unique characteristics. Will personal identifying information be shared publicly? The protection of your privacy and personal information is one of our highest priorities. Only a small number of the research staff will have access to personal information such as your name, birthdate and phone number. A random participant ID will be generated for the data collected from your participation. We will remove any information that can potentially be traced back to you. What will happen to my blood and urine samples? For your blood, we will first run a few tests similar to what they do at your physician's office, such as A1c and a lipid analysis. Some of the blood will be put into a "library" for scientists to access; one of the future uses for this library may be gene sequencing.Your urine sample will be used to look at kidney function and any remaining urine will be disposed of. Will I be able to withdraw from the research program? Yes, if you have changed your mind about participation, you may contact us to withdraw your consent. Please note, however, that any data we have collected until that time will not be able to be withdrawn from our database; this is because of the way we de-identify and store them. Why am I asked to place an environmental sensor in my residence? We are interested in learning how the specifics about the environment you live in may

		affect your health. The sensor will collect light levels, quality of air, and temperature. Again, we respect you and your family's privacy and boundaries; we will only record the factors listed above, and no photography or audio recording is possible with the sensor. They are designed and built without these capabilities. Will my doctor be notified about my participation? Providers with access to your electronic health records may be able to see your enrollment in our program; however, they will not be able to see your results unless you send it to them. Your participation or refusal of participation will not influence the quality of care you receive at UW Medicine/UCSD Health/UAB Medicine. Will I receive my results from the research program? At the end of your in-person visit, you will receive a data card that lists some of the data from your in-person visit, including your blood pressure, heart rate, and visual acuity. We will let you know if these values fall outside of expected ranges and discuss follow-up care, if necessary. Additionally, you will receive the results of your 10-day continuous glucose monitoring after you have returned the device to us, which you may then review with your healthcare provider. You will also be provided a personalized code/link that is unique to you. Within one year of the visit, you will be able to use this code to access the results of your blood and urine testing. The lab results are intended for physician use only, and although we cannot provide medical guidance about your results, we encourage you to discuss them with your primary care provider. Can I skip some tests or questions in the surveys? Please let us know if you are not comfortable with any of the tests, and we can stop and talk about your options. You will be given the option to not answer questions in questionnaires that make you uncomfortable. However, some components of the research program are essential, meaning we cannot complete a visit without them; in that case, we can withdraw you from the research program if you choose not to continue. I have more questions, who can answer them? Our research team is happy to answer any questions you have. Select the "I still have questions and I would like to have a staff member call me" button below to submit a request for a phone call from one of our team members. We also welcome your call or email! The phone numbers and email addresses for each of our research sites are listed above. We'd enjoy giving you any additional information on AI-READI. We hope to hear from you!

100	[preconsent_msg_1] Show the field ONLY if: [precon_nd(999)] = '0'	What is Consent Informed consent is the process of explaining the key elements of a research study to potential participants. An important part of the consent process is making sure that you, as a volunteer, understand what is expected of you should you choose to participate, as well as any potential risks and benefits that are associated with the research and how your data will be used. Participating in any human research project is voluntary. Please read the summary of key elements of our program below.	descriptive
101	[preconsent_msg_2] Show the field ONLY if: [precon_nd(999)] = '0'	Key Elements of the Research Program The AI-READI research program is aimed at generating an inclusive database that will help scientists better understand how type 2 diabetes impacts us all. Our goal is to collect data from a diverse group of people, with and without type 2 diabetes. Your data will be de-identified, meaning there will be no identifying information associated with it. The data we are collecting is also diverse, which with the help of artificial intelligence, may uncover trends in the progression of the disease that have been missed by scientists in the past. Your participation will include three elements: Completion of short questionnaires from home, on your own time An in-person visit to our Clinical Research Unit, where we will perform routine examination procedures that you would have done in a physician's office An at-home component, during which you will use small devices to monitor your physical activity, air quality in your home, and continuous blood glucose levels for 10 days. These devices do not have the ability to capture sound or video. You will receive a $200.00 honorarium as a thank you after your full participation in AI-READI.	descriptive

Information will be collected from people with and without diabetes and from diverse racial and ethnic backgrounds. The type of data collected from you has been specifically designed to answer research questions about type 2 diabetes, but may also be used by scientists to study other aspects of health, disease, and behavior. After removing the information that may reveal your identity, we will place the data we collect from you, along with that from thousands of other volunteers, into a database for the purpose of scientific discovery. The database will be publicly accessible to anyone who is interested in studying type 2 diabetes. However, a portion of the database will be under controlled access. By controlled access we mean that a researcher who wants access to this portion of data will submit a request to be reviewed by a committee of AI-READI investigators. If the AI-READI committee approves the request, this will require legal and privacy protection agreement between the researcher and/or institution requesting the data and the AI-READI research program. The table below explains which information will be publicly accessible and which will be held under controlled access. List of publicly accessible data Survey data (e.g., questionnaires on medications, mental health data, social determinants of health) Clinical measurements (vitals, such as height and weight, visual acuity, monofilament test, and cognitive function testing results) Retinal Images Blood and urine lab results Electrocardiogram (ECG) Physical activity levels and heart rate Blood sugar levels Home air quality, temperature, and humidity List of data held under controlled access 5-digit ZIP code Genetic sequence Race/ethnicity Sex Past health records Motor vehicle accident reports	descriptive
149	[icf_proceduresx] Show the field ONLY if: [icf_version] = '1'	STUDY PROCEDURES: Your study participation will consist of one in-person study visit followed by approximately ten days of at-home study participation. Your total active study participation is	descriptive

		expected to be approximately 11 days. At the end of the home study participation, you will be expected to return several study items. The study payment is contingent upon the successful return of all devices.	
150	[icf_proceduresx_2] Show the field ONLY if: [icf_version] = '2' or [icf_version] = '3'	Before your information is made publicly available, a de-identified copy of your data will be provided to the companies (Carl Zeiss Meditec, Inc., DexCom, Inc., and iCare USA, Inc.) that supported this research program through their sharing of equipment used for data collection. If companies wish to access any information that is under controlled access, they will be required to follow the same procedures as other researchers. The data collected in this research program may be used for future research to learn about type 2 diabetes, health, disease, and behavior, but may also be used for other purposes, such as product development. The data stored in the AI-READI database will be analyzed in the future using artificial intelligence/machine learning (AI/ML). Other analysis techniques may also be used. AI/ML looks for patterns using very large datasets and can help with new discoveries in understanding of health and disease.	descriptive
151	[icf_progproceduresx_2] Show the field ONLY if: [icf_version] = '2' or [icf_version] = '3'	RESEARCH PROGRAM PROCEDURES: Your participation in our research program will consist of one in-person visit lasting about 3-4 hours. We will encourage you to fill out survey questions at home, prior to your in-person visit to decrease your visit duration. However, if you prefer, you can complete the questionnaires during your in-person visit, which will make your visit longer. After your in-person visit, there is approximately ten days of at-home participation, as described below. Your total active participation is expected to be approximately 11 days. At the end of the at-home participation period, you will be expected to return several monitoring devices. A payment of $200 will be provided for your participation in this research program and is contingent upon the successful return of all devices.	descriptive
152	[icf_instudy_part] Show the field ONLY if: [icf_version] = '1'	IN-PERSON STUDY PARTICIPATION: Sample CollectionWe will collect a urine sample and about 3-4 spoonful's of blood (50-60mL). You will not need to be fasting. We will use these samples to aid in assessing your general health. DemographicsWe will ask you about your racial and ethnic background and collect other basic demographic information, and to fill out several questionnaires related to general health, diabetes, and social factors associated with health and disease. You do not need to answer any question you are uncomfortable with. Additional TestingWe will test your memory and other thinking processes, measure your vital signs such as blood pressure, height, and weight, and perform an ECG (electrocardiogram) to see how your heart works.	descriptive

		We will also use thin bendable wires to evaluate how well you can feel the sense of touch on the bare soles of your feet. This is called a monofilament test and it is important for people who have diabetes because this disease often changes the ability to sense touch in some areas of the body. Eye TestingWe will test and image your eyes, part of this process may be similar to tests you had when visiting an optometrist or ophthalmologist in the past. We will test your glasses prescription and your vision by asking you to read letters under normal and reduced light. We will also take images of the back of your eyes using several different cameras. We will need to apply eye drops to enlarge your pupils and get better pictures of your eyes. If you are sensitive to the drops, we may choose to use only one type of eye drops or take the pictures without using the drops. Glucose MonitoringWe will attach a continuous glucose monitoring device, also known as a CGM, to the skin of your stomach. The CGM has a sticker that keeps it in place on your stomach and a small sensor that will go under your skin to monitor your blood glucose. To get the sensor under your skin, you will push a button on the CGM and you will feel a slight pinch when the sensor goes into your skin. The study personnel will be present with you during the entire set up.	
153	[icf_instudy_part_2] Show the field ONLY if: [icf_version] = '2' or [icf_version] = '3'	IN-PERSON PARTICIPATION: Blood and Urine Sample CollectionWe will collect a urine sample and about 3-4 spoonfuls of blood (50-60mL). 		to enlarge your pupils and get better pictures of your eyes. If you are sensitive to the drops, we may choose to use only one type of eye drop or take the pictures without using the drops. Glucose MonitoringIt will be important for our research program to understand how your glucose levels change during your daily activities. During your in-person visit, we will attach a continuous glucose monitoring device, also known as CGM, to the skin of your stomach. The CGM has a sticker that keeps it in place and a small sensor that will go under your skin to monitor your blood glucose. To get the sensor under your skin, a button on the CGM will be pushed and you will feel a slight pinch when the sensor goes into your skin.	
154	[icf_athome_part] Show the field ONLY if: [icf_version] = '1'	AT HOME STUDY PARTICIPATION: Glucose MonitoringIt will be important for our research study to understand how your glucose levels change during your daily activities. You will wear the continuous glucose monitor (CGM) device for 10 days. The CGM sensor will need to be returned at the end of the study as described below. Physical Activity TrackingWe will provide you with a physical activity tracker to wear for 10 days on your wrist to check how much time you spend walking, sitting, sleeping, or exercising, which also assesses your heart rate and oxygen level in your blood. The fitness tracker will not record any GPS data. It will be your responsibility to charge the device every day (evening recommended). The physical activity tracker must be returned at the end of the study as described below. Air Quality MonitoringWe want to explore the connection between air quality and diabetes. We will also provide you with a small sensor to keep in your house for 10 days. This sensor is for us to collect information on the air, light, temperature, and particles at home. You will not need to do anything besides place this device somewhere in your home. This sensor does not have a camera or microphone. It cannot collect any video, photographs, or sound from your home. Returning the DevicesAfter 10 days, you will peel off the glucose monitoring device and you may notice a small dot on your skin where the sensor was for 10 days (instructions on removal and study contact information in case you need help at home will be provided). The CGM sensor that you peeled off, the physical activity tracker, and the environmental sensor will be mailed back to the study in the prepaid mailing boxes provided.	descriptive
155	[icf_athome_part_uab_2] Show the field ONLY if: [icf_version] = '2' and [record-dag-name] = 'uab'	AT HOME PARTICIPATION: Glucose MonitoringYou will wear the continuous glucose monitor (CGM) device for 10 days. The CGM sensor will need to be returned at the end of your participation, as described below. If you are already wearing a CGM device that is identical to the one used in this study, you will be given an option not to put an additional CGM. If you agree to this, you will be given an option to allow us to collect glucose measurements	descriptive

		up to 90 days prior to your in-person visit, in addition to the study data collection (10 days) for a total of up to 100 days. This additional data collection through Dexcom Clarity (a glucose monitoring application or "app") is optional and limited to those who are already using the application at the time of the in-person visit and who agree to the optional data collection. The CGM data will be returned to you by email as a password-protected PDF or, if you choose, printed copies may be provided to you by mail or in-person. Physical Activity TrackingWe will provide you with a physical activity tracker to wear for 10 days on your wrist that will monitor your heart rate, number of steps you take, oxygen level in your blood, and the time you spend sleeping. The fitness tracker will not record any location (GPS) data. It will be your responsibility to charge the device every few days and make sure that is fully charged before you return the watch to us. The physical activity tracker must be returned at the end of your participation, as described below. If you are already wearing an activity tracker. You may continue to wear it in addition to wearing the device we provide, or you may choose to wear only the device we provide. We will not collect data from your existing activity tracker and will only collect data from our activity tracker device. Air Quality MonitoringWe want to explore the connection between air quality and diabetes. We will provide you with a small sensor to keep in your house for 10 days. This sensor is for us to collect information on the air, light, temperature, and particles at home. You will not need to do anything besides place this device somewhere in your home. This sensor does not have a camera or microphone. It cannot collect any video, photographs, or sound from your home. Returning the DevicesAfter 10 days, you will peel off the glucose monitoring device (CGM) using instructions on the sheet provided to you during your in-person visit. The instructions sheet also contains our contact information in case you need help from us while at home. You may notice a small dot on your skin where the sensor was placed for 10 days. The CGM sensor that you removed, the physical activity tracker, and the environmental sensor will be mailed back to the research team in the prepaid FedEx mailing boxes provided to you during your in-person visit.

164	[icf_risks] Show the field ONLY if: [icf_version] = '1'	RISKS, STRESS, OR DISCOMFORT: Some of the study procedures may feel uncomfortable to you. Eye ExamOne or more of the eye drops can cause mild and brief irritation to your eyes. The eye drops used for imaging will make your vision blurry and you will be sensitive to light for several hours. It is recommended that you do not drive until your vision is back to normal, or that you have someone accompany you to your visit to drive you home. We will provide you with tinted shields to reduce the effect of light on your eyes during this period. Eye imaging can occasionally take a long time, or the light source used during imaging may cause slight discomfort or a headache. To make you feel more comfortable, you can take breaks during testing. Extremely rarely, the eye drops may cause serious reactions, including but not limited to sudden increase in eye pressure (which you may feel as eye pain, redness, sudden change in vision), increased blood pressure, fainting and allergic reactions. We do not anticipate any of these reactions will happen, but if you do experience any of these rare events during the course of the visit, we will seek out emergency medical attention for you. Blood SamplesDuring collection of the blood sample, you may experience mild discomfort or pain. Some people may develop bruising at the puncture site, feel dizzy or faint. Extremely rarely the puncture site may become infected, which could lead to hospitalization or death. Continuous Glucose MonitoringInsertion of the CGM may cause bruising, pain, or infection at the insertion point. If the CGM is uncomfortable, you may remove it early and return it to the study by mail. Confidentiality BreachAlthough we make every effort to protect your information, a confidentiality breach is possible, but rare. Sensitive Information CollectionIn the study, we will collect information about alcohol, smoking or vaping, and marijuana use. You can refuse to provide this information if you feel uncomfortable about sharing it or if sharing would put you in legal jeopardy.	descriptive
165	[icf_risks_uab_2] Show the field ONLY if: ([icf_version] = '2' or [icf_version] = '3') and [record-dag-name] = 'uab'	RISKS, STRESS, OR DISCOMFORT: Some of the research procedures may feel uncomfortable to you. 		Extremely rarely, the eye drops may cause serious reactions, including but not limited to sudden increase in eye pressure (which you may feel as eye pain, redness, sudden change in vision), increased blood pressure, fainting, allergic reactions, or dilated pupils that last for more than several hours. These reactions will be rare despite the fact that dilation drops are used routinely in eye exams. However, if you do experience any of these rare events as a result of the visit, we will seek out emergency medical attention for you. Blood SamplesDuring collection of the blood sample, you may experience mild discomfort or pain. Some people may develop bruising where the needle goes into your skin, feel dizzy or faint. Extremely rarely, the site where the needle goes into your skin may become infected, which could lead to hospitalization or death. Continuous Glucose MonitoringInsertion of the CGM may cause bruising, pain, or infection at the insertion point. If the CGM is uncomfortable, you may remove it early and return it to the research team when you return the other home monitoring devices (after 10 days of use). Confidentiality BreachAlthough we make every effort to protect your information, a confidentiality breach is possible, but rare. You will be notified if there is a data breach. Your participation ID that is linked to your health record will be kept by the research program investigators for the duration of the project. Sensitive Information CollectionWe will collect information about your use of alcohol, smoking and vaping. You can refuse to provide this information if you feel uncomfortable about sharing it or if sharing would put you in legal jeopardy. Risks of a Publicly Accessible Database and a Controlled Access DatabaseFuture technologies may make it possible to link the personal health information stored in the publicly accessible database or the controlled access database to your identity. This personal health information includes your ECG, heart rate, retinal imaging, environmental sensor data, physical activity data, genetic sequence, 5-digit ZIP code, race/ethnicity, past health records, sex, and motor vehicle accident data. The likelihood of you being identified is low, but possible. Anyone accessing the publicly accessible database or the controlled access database where your information is stored will agree to not identify you or use the data in ways that could be harmful to you.	
166	[icf_risks_ucsd_2] Show the field ONLY if: ([icf_version] = '2' or [icf_version] = '3') and [record-dag-name] = 'ucsd'	RISKS, STRESS, OR DISCOMFORT: Some of the research procedures may feel uncomfortable to you. Eye TestingOne or more of the eye drops can cause mild and brief irritation to your eyes. The eye drops used for imaging will make your vision blurry and you will be sensitive to light for several hours. It is recommended that you do not drive until your vision is back to normal, or that you have someone accompany you to your visit to drive you home. We	descriptive

		will provide you with tinted shields to reduce the effect of light on your eyes during this period. Eye imaging can occasionally take a long time, or the light source used during imaging may cause slight discomfort or a headache. To make you feel more comfortable, you can take breaks during testing. Extremely rarely, the eye drops may cause serious reactions, including but not limited to sudden increase in eye pressure (which you may feel as eye pain, redness, sudden change in vision), increased blood pressure, fainting, allergic reactions, or dilated pupils that last for more than several hours. These reactions will be rare despite the fact that dilation drops are used routinely in eye exams. However, if you do experience any of these rare events as a result of the visit, we will seek out emergency medical attention for you. Blood SamplesDuring collection of the blood sample, you may experience mild discomfort or pain. Some people may develop bruising where the needle goes into your skin, feel dizzy or faint. Extremely rarely, the site where needle goes into your skin may become infected, which could lead to hospitalization or death. Continuous Glucose MonitoringInsertion of the CGM may cause bruising, pain, or infection at the insertion point. If the CGM is uncomfortable, you may remove it early and return it to the research team when you return the other home monitoring devices (after 10 days of use). 169	[icf_benefits] Show the field ONLY if: [icf_version] = '1'	BENEFITS OF THE STUDY: Results of your blood and urine tests will be available for you to look up with your personal ID code in approximately 1 year. Please note that a doctor will not be reviewing the results of any test performed as part of this study. The results of blood and urine tests change over time, so results received after 1 year may not be reflective of your health status at that time. The results returned to you are not meant to replace any medical care you currently have planned or should receive in the future. At the end of the study visit, you will receive a card that includes your vital signs and eyesight measurements. The following will NOT be provided to you: genetic testing data, ECG, environmental sensor data, fitness tracker data, CGM data, retinal imaging, questionnaires and cognitive testing results, results derived from samples left in a biorepository or data obtained in future research projects.	descriptive
170	[icf_benefits_2] Show the field ONLY if: [icf_version] = '2' or [icf_version] = '3'	BENEFITS OF PARTICIPATING IN THE RESEARCH PROGRAM: The main benefit of contributing to a multi-racial, multi-ethnic database is that it will enable medical research to lead to a better understanding of type 2 diabetes, health, disease, and behavior. It may also uncover new associations in type 2 diabetes that can lead to healing and be broadly applicable to many communities. While there may not be a direct benefit to you, there may be benefits to many people similar to you in the future. At the end of your in-person visit, you will receive a card that includes your vital signs and eyesight measurements. We will let you know if any of these measurements are outside of expected ranges and discuss follow-up care, if necessary. You will also receive a detailed report of your continuous glucose measurements after you return the glucose monitor to us. You may choose to share this report with your primary health care provider. Results of your blood and urine tests will be available for you to look up with your personal ID code in approximately 1 year. Please note that a doctor will not be reviewing the results of any test performed as part of this research program. The results of blood and urine tests change over time, so results received after 1 year may not be reflective of your health status at that time. 184	[icf_info_specimens] Show the field ONLY if: [icf_version] = '1'	USE OF INFORMATION AND SPECIMENS: Genetic SequencingSamples collected from you will be used to test your genetic information. We will perform whole genome sequencing on your blood sample. Whole genome sequencing is a laboratory procedure that determines a precise DNA fingerprint. The precise DNA fingerprints from all the study participants can then be used to learn how genetics impact health and type 2 diabetes.	descriptive

		The results of the whole genome sequencing will be released in a protected data set along with other protected health information for use in future research studies. Returning Results to YouUp to twelve months after your participation in the study, you will receive a unique identifier code. You will be able to look up your results from the blood and urine tests using this identifier code. There will be no interpretations provided for the test results, but you are able to download the results whenever you wish and discuss this with your medical provider. Using Your Data and Specimens in Future ResearchThe information and specimens that we obtain from you for this study might be used for future studies. We may remove anything that might identify you from the information and specimens. If we do so, that information and specimens may then be used for future research studies or given to another investigator without getting additional permission from you. The publicly available dataset, biospecimens (such as blood, tissue, or saliva) collected from you for this study and/or information obtained from your biospecimens may be used in this research or other research, and shared with other organizations. You will not share in any commercial value or profit derived from the use of your biospecimens and/or information obtained from them. It is also possible that in the future we may want to use or share study information and specimens that might identify you. If we do, a review board will decide whether or not we need to get additional permission from you. By participating in this study, you are providing us the permission to contact you again regarding future studies. By participating in this study, you are providing us the permission to contact you again regarding future studies.	
185	[icf_info_specimens_2] Show the field ONLY if: [icf_version] = '2' or [icf_version] = '3'	USE OF INFORMATION AND SPECIMENS: Genetic SequencingBlood samples collected from you will be used to test your genetic information. The precise DNA fingerprints from all the research program participants can then be used to learn how genetics impact type 2 diabetes, health, disease, and behavior. The results of the whole genome sequencing will be released in the protected data set (under controlled access) along with other protected health information for use in future research studies. Returning Results to YouWe will provide you with your physical measurements on the same day they are collected. You will receive a report of results from the CGM after the 10-day wear period is complete and the sensor is returned to us. Within 12 months from your in-person visit, you will receive a link to a unique identifier that will let you review your blood and urine results. There will be no interpretations	descriptive

		provided for the test results, but you are able to download the results whenever you wish and discuss this with your medical provider. In the future, it may be possible for researchers to provide you with more study data. We will contact you in the future if we are able to share additional data with you. Just like the physical measurements and glucose monitoring data that we give you, you can choose to share any future additional data we give to you with your medical provider. Although you will not receive copies of the pictures taken of your eyes, if we detect a retinal detachment, optic nerve swelling, or any findings suggesting the presence of a tumor in your eye, then we will inform you and advise you on follow-up care. Using Your Data and Specimens in Future ResearchThe information and specimens that we obtain from you for this research program might be used for future studies. We may remove anything that might identify you from the information and specimens. If we do so, that information and specimens may then be used for future research studies or given to another investigator without getting additional permission from you. The publicly available dataset and samples collected from you (such as blood products) for this research program, and/or information obtained from your biospecimens may be used in this research or other research, and shared with other organizations. You will not share in any commercial value or profit derived from the use of your samples and/or information obtained from them. It is also possible that in the future we may want to use or share information and specimens obtained from you during this research program that might identify you. If we do, a review board will decide whether or not we need to get additional permission from you. By participating in this research program, you are providing us the permission to contact you again regarding future studies.	
186	[icf_genomic] Show the field ONLY if: [icf_version] = '1'	GENOMIC DATA SHARING: This study will involve whole genome sequencing. The National Institutes of Health (NIH) has developed data (information) banks that collect study data. The NIH will store your de-identified information in these data banks for other researchers to use in future studies on any topic. The researchers could be from government, academic, or commercial institutions. You will not receive any results related to your data to be placed in the NIH data banks. You will not be able to withdraw your information after it has been submitted to the NIH data banks as it is not possible to guarantee retrieval of the information from all possible sources that had access to the data once it is released. There is a small risk that others will be able to trace this information back to you or close biological relatives. The current risk of this happening is very small, but may grow in the future as new technologies are developed. If this	descriptive

		should happen, someone might use this information to learn something about your health or genetic heritage. If linked to a medical condition and inappropriately shared with someone, it could affect your ability to get or keep some kinds of insurance. There is a possibility that this information could affect family members because certain conditions and traits run in families and are inherited through genes. This could hurt family or other relationships. There is a risk that your information could become known to the public, employers, or law enforcement agencies. The information may be used to enforce negative stereotypes. It is possible that your information could be used to identify you when combined with information from other public sources. There may also be other risks that are not yet known.	
187	[icf_genomic_2] Show the field ONLY if: [icf_version] = '2' or [icf_version] = '3'	GENOMIC DATA SHARING: This research program will involve whole genome sequencing. The National Institutes of Health (NIH) has developed data (information) banks that collect research data. The NIH will store your de-identified information in these data banks for other researchers to use in future studies on any topic. The researchers could be from government, academic, or commercial institutions. You will not receive any results related to your data to be placed in the NIH data banks. We do not know what future research could be conducted using data from this bank. You will not receive any information about studies that are conducted using data that you have contributed. The results of these studies may be published in scientific journals, and/or written about in newspapers or magazines. You will not be able to withdraw your information after it has been submitted to the NIH data banks. This is because it is not possible to know who has downloaded the data from the bank or where it may be stored once released to the public. There is a small risk that others will be able to trace this information back to you or close biological relatives. The current risk of this happening is very small, but may grow in the future as new technologies are developed. If this should happen, someone might use this information to learn something about your health or genetic heritage. If linked to a medical condition and inappropriately shared with someone, it could affect your ability to get or keep some kinds of insurance. There is a possibility that this information could affect family members because certain conditions and traits run in families and are inherited through genes. This could hurt family or other relationships. There is a risk that your information could become known to the public, employers, or law enforcement agencies. The information may be used to enforce negative stereotypes. It is possible that your information could be used to identify you when combined with	descriptive

		information from other public sources. There may also be other risks that are not yet known.	
188	[icf_genomic_uab_2] Show the field ONLY if: ([icf_version] = '2' or [icf_version] = '3') and [record-dag-name] = 'uab'	A federal law, called the Genetic Information Nondiscrimination Act (GINA), generally makes it illegal for health insurance companies, group health plans, and some employers to discriminate against you based on your genetic information. This law generally will protect you in the following ways: Health insurance companies and group health plans may not request your genetic information that we get from this research. Health insurance companies and group health plans may not use your genetic information when making decisions regarding your eligibility or premiums. Employers with 15 or more employees may not use your genetic information that we get from this research when making a decision to hire, promote, or fire you or when setting the terms of your employment. Be aware that this federal law does not protect you against genetic discrimination by companies that sell life insurance, disability insurance, or long-term care insurance, nor does it protect you against genetic discrimination by some employers.	descriptive
189	[icf_other_info] Show the field ONLY if: [icf_version] = '1'	OTHER INFORMATION: You may refuse to participate, and you are free to withdraw from this study at any time without penalty or loss of benefits to which you are otherwise entitled. If you wish to withdraw, please contact the researcher listed on page 1 of this form. Once we receive the information, we will stop accessing any of the data or your medical records per study protocol as written in this consent but we will not be able to retrieve any data that has already been shared. Participation in this study will not incur any charges to you or your insurance. We will cover reasonable costs for your transportation or parking costs related to the study visit(s). Upon the successful completion of the In Person Study Visit, the At Home Study Participation and returning of all devices (the physical activity tracker, environmental sensor and the continuous glucose monitor) via mail, you will be paid $125 for your participation. It may take 2 weeks (or more) for you to receive your payment after you return the devices.	descriptive

You can tell the researcher in person or call them at the 24-hour number listed at the top of this form. If you are injured as a result of being in this study, necessary medical treatment will be offered at a UW Medicine facility. The cost of the treatment may be billed to you or your health insurance just like other medical costs, or it may be covered by the UW's discretionary Human Subjects Assistance Program (HSAP), depending on a number of factors. The researcher may request HSAP coverage by following established procedures. If you wish to request HSAP coverage yourself, contact the researcher or the UW Human Subjects Division at hsdinfo@uw.edu or 206-543-0098. Ask the researcher if you would like information about the limits and conditions of the HSAP. The UW does not normally provide any other form of compensation for injury. However, the law may allow you to seek payment for injury-related expenses if they are caused by malpractice or the fault of the researchers. You do not waive any right to seek payment by signing this consent form.	descriptive
