Table 2. Mapping Coverage of AI-READI Survey Data Elements by Category and OMOP Vocabulary

Category / Vocabulary	Data Elements, n (%)	Distinct Concepts, n	Typical Role in Mapping
Mapped to standard concepts	**1,412 (48.6)**	**380**	
LOINC	1,203 (41.4)	283	Survey questions, answer options, structured assessments, laboratory tests
SNOMED CT	134 (4.6)	68	Clinical conditions, findings, qualifier values
UCUM	69 (2.4)	23	Units of measure for quantitative responses and laboratory results
PPI	5 (0.2)	5	Participant-provided information survey items
OMOP Extension	1 (<0.1)	1	Pre-existing OMOP extension concept
Mapped to AI-READI custom concepts	**488 (16.8)**	**343**	
AI-READI	389 (13.4)	266	General survey constructs and patient-reported observations
AI-READI Vision	69 (2.4)	47	Ophthalmologic assessment elements
AI-READI MoCA	30 (1.0)	30	Montreal Cognitive Assessment items and subscores
Mapped total	**1,900 (65.4)**	**723**	
Designated but not mapped to concepts	**104 (3.6)**	—	Reference ranges, specimen metadata, survey administration fields, data-entry modifiers
Not designated for OMOP mapping	**902 (31.0)**	—	
Total	**2,906 (100)**	—	

Individual survey questions and response choices constitute discrete data elements, corresponding to rows in the value-set mapping, whereas distinct concepts correspond to unique OMOP concept identifiers. All calculated percentages reflect all 2,906 curated data elements. REDCap survey start and completion timestamps (n = 34) were assigned AI-READI custom concepts in the mapping file but were counted as designated but not mapped, because they are system metadata rather than survey content; including them would yield 522 custom-mapped elements and 345 distinct custom concepts. LOINC, Logical Observation Identifiers Names and Codes; MoCA, Montreal Cognitive Assessment; PPI, Participant Provided Information; SNOMED CT, Systematized Nomenclature of Medicine Clinical Terms; UCUM, Unified Code for Units of Measure.
